**Subject:** Info on methyl bromide misapplication on St. John, USVI

Richard,

Attached below are the photos you requested. They show the MB cylinder with the mfr labels. The condos where the fumigant was misapplied is called Sirenusa, located on St. John in the USVI, units J upper and J lower. It's a time-share resort with its own web site. You can also access the EPA public web site at [www.epa.osc.org](http://www.epa.osc.org). Click on Web Sites, then Region 2. A list of sites will appear and this site, Sirenusa Condo Methyl Bromide, should be first in the left hand column. It has photos, docs and pollution reports, all of which you can access. It's updated daily and is current as of about 1PM today.

The cylinder involved in this incident is in the Terminix warehouse so it's secure at the moment, but we'd like to get it overpacked and transported off island in an expeditious time frame. We are hoping that Chemtura can assist EPA in this task under the principles of Responsible Care™ and product stewardship. EPA will provide trained contractor personnel and an EPA On-Scene Coordinator on-island to package the cylinder and facilitate shipping to a mainland location of your choosing. It would be shipped as returned goods under a Dangerous Goods bill-of-lading with the appropriate IOTA shipping name and requisite labels, placards etc.

You can contact me at this e-mail address or on my cell phone, 24/7, at 732-321-6617.

EPA very much appreciates any assistance you can provide in this matter.

Paul L. Kahn
